4.1.

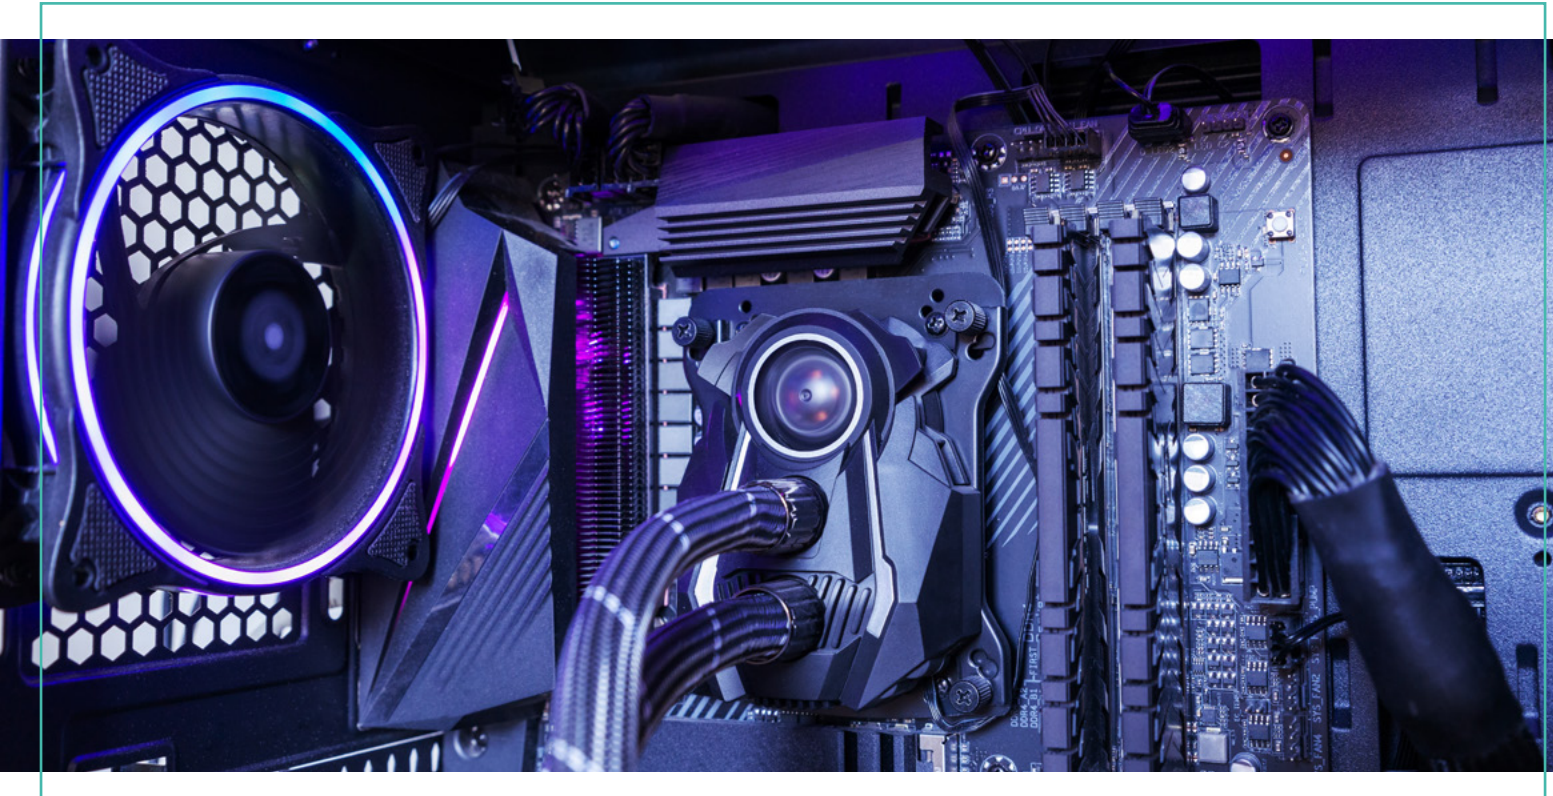

What is a computer and how does it work?

A computer is a machine which has **hardware** and **software**. An **input** unit sends data to the computer, which processes it before sending it back through an output device.

The input devices on a computer can be different depending on the type of computer. However, many computer devices like the mouse, keyboard, and even programmes accompany computers. Once the data is received, the central processing unit (**CPU**) is in charge of processing the information with the help of other components. The data is sent back through an **output** device when it is ready.

The **CPU is the most essential component in a computer**. It processes instructions and sends signals to other components. Moreover, it is responsible for most of the operations which enable it to work. Random-access memory (**RAM**) is a computer component which **stores data which is used by the operating system and software applications so that the CPU can process them fast**.

RAM, or the hard disc drive, is where **images, apps, papers, and other files are kept**. Although they are still in use, now there are faster and more dependable storage technologies such as solid-state drives (**SSD**). There are some more additional components in a computer such as the **sound card and a video card**. The sound card's first function is to play audio through a speaker. A video card, on the other hand, is used to display graphics on the screen. Without it, a black monitor would only be seen.

4.2.

Types of PCs

Depending on the purposes, computers can be divided according to five types of personal computers.

- > **Desktop:** it is the most common personal computer, and it is designed to be on a desk or a table.
- > **Laptops or notebook:** it is a portable personal computer designed to have all the functions of a desktop computer. It can be operated by alternating current or direct current by battery. Its weight is less than 8 pounds.
- > **Handled computer:** the most popular kind is the personal digital assistant (PDA). PDA is used for special tasks like taking notes, displaying telephone numbers and addresses, and keeping track of dates or agendas. PDAs can be connected to larger computers to exchange data.
- > **Smartphone:** it is the smallest PC at present which can be easily carried in a pocket and provides a connection to a cellular network.
- > **Tablet:** it is a touch screen device. It is larger than a smartphone but smaller than a laptop. It takes features from both devices to create a type of device between a phone and a computer.

TO KEEP IN MIND!

- + **Hardware:** the physical components that a computer system needs to work.
- + **Software:** it is the set of instructions which allow the hardware to perform a specific set of tasks.
- + **Input:** it is the data which is received by a computer.
- + **Output:** it is the data which the computer sends.

4.3.

Let's practise!

1. Match the definitions with the suitable terms of a desktop computer.

Speakers	Screen	Keyboard	Printer	Flash memory
System unit	Web cam	Mouse	USB drive	Microphone

	1. it is a flat surface on which a picture or series of pictures is projected.
	2. it is a hand-held pointing device which detects two-dimensional motion relative to a surface.
	3. it is an electronic device which transfers text or images files them to a paper medium.
	4. it is a panel of keys which operates a computer or typewriter.
	5. it is an output hardware device connected to a computer to generate sound.
	6. it is the part of the computer which holds the primary devices to perform operations and produce results for complex calculations.
	7. it is a device that translates sound vibrations in the air into electronic signals.
	8. it is a device used for data storage.
	9. It is a digital video device which transmits pictures over the Internet.
	10. It is an electronic non-volatile computer memory storage medium that can be electrically erased and reprogrammed.

2. Pay attention to the photos and label the right and left-side components of a laptop.

DC adapter	Memory card slot	USB 3.0 adapter	
LAN port	HDMI port	USBC port	Headphone output

Left-side components

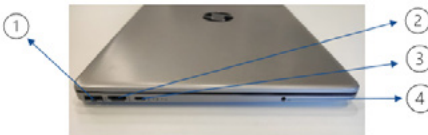

1. _____

2. _____

3. _____

Right-side components

1. _____

2. _____

3. _____

4. _____

3. Label the pictures below with their appropriate name.

Microprocessor

Hard disk

Hard drive

Battery

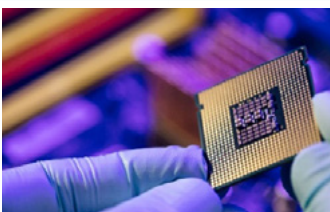

Fan

Test yourself!

1. What are the two main parts of a computer system?
 - a. RAM and CPU
 - b. Hardware and software
 - c. Monitor and keyboard
 - d. Input and output
2. What does the CPU do in a computer system?
 - a. Processes instructions and controls other components
 - b. Powers the monitor
 - c. Stores documents and files
 - d. Outputs sound
3. What type of memory stores data used by the operating system and software?
 - a. Hard drive
 - b. Flash memory
 - c. CPU
 - d. RAM
4. Which device is used to enter data into a computer?
 - a. Speaker
 - b. Monitor
 - c. Keyboard
 - d. Printer
5. Which component displays images on a screen?
 - a. CPU
 - b. Sound card
 - c. Video card
 - d. Flash memory
6. What is an SSD used for?
 - a. To play music
 - b. To store files and data
 - c. To display output
 - d. To send signals to the keyboard

7. Which of these is NOT a type of personal computer?

- a. Desktop
- b. Smartphone
- c. Tablet
- d. Scanner

8. What defines a laptop compared to a desktop?

- a. It is portable and lighter
- b. It requires no electricity
- c. It can only be used at a desk
- d. It has no screen

9. What is a PDA mainly used for?

- a. Watching movies
- b. Playing video games
- c. Designing graphics
- d. Managing contacts, notes, and schedules

10. Which of the following defines the term "output"?

- a. The physical components of a computer
- b. The data sent from the computer to the user
- c. The commands typed on a keyboard
- d. The programs running in the background

4.4.

Answer key

Let's practise!

1.

- | | |
|-------------|------------------|
| 1. Screen | 6. System unit |
| 2. Mouse | 7. Microphone |
| 3. Printer | 8. USB |
| 4. Keyboard | 9. Web camera |
| 5. Speakers | 10. Flash memory |

2.

> Left-side:

1. USB 3.0 port
2. memory card slot
3. DC adapter

> Right-side:

1. LAN port
2. HDMI port
3. USB-C port
4. Headphone output

3.

1. Fan
2. Hard disk
3. Microprocessor
4. Hard drive
5. Battery

Test yourself - Answer key

- | | | |
|------|------|-------|
| 1. B | 5. C | 9. D |
| 2. A | 6. B | 10. B |
| 3. D | 7. D | |
| 4. C | 8. A | |
